

ONLINE CATALOGUE TUFTING – INTERACTIVE SUPPORT

With its online catalogue Gauge Parts Tufting Groz-Beckert is offering an innovative and constantly updated tool for comfortable searching and precise identification of Gauge Parts Tufting. After successful registration the interactive system can be used free of charge, and its intelligent and detailed solutions set new standards.

FAST AND SIMPLE

Groz-Beckert is the world's leading provider of precision components, systems and services for the most varied textile production methods, and this also extends to the Gauge Parts Tufting product sector. This applies not only to the quality of the products but also to all other services provided to customers worldwide.

The new interactive online catalogue Tufting is purely web-based and requires no additional software support. The basic functions are open to all users. After registration, additional options are available, including the registration of customer-specific designations for certain products. The relevant registration form is attached.

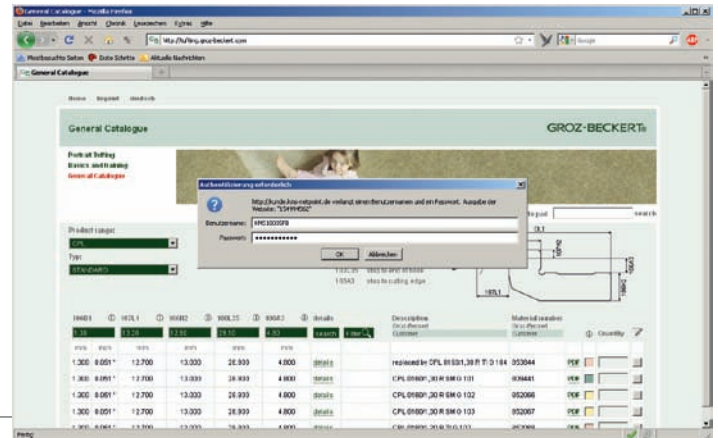

The benefits at a glance:

- Fast, up-to-date product inquiries
- Intuitive guidance to product sought – step by step
- Constantly updated product portfolio
- Basic know-how provided
- Improved request quality – thanks to precisely defined products and product variants to match them

INTUITIVE OPERATION

Registration

Following registration for the online catalogue, Groz-Beckert will send all those interested a user name and a personal password. The data can then be used for online registration at www.groz-beckert.com

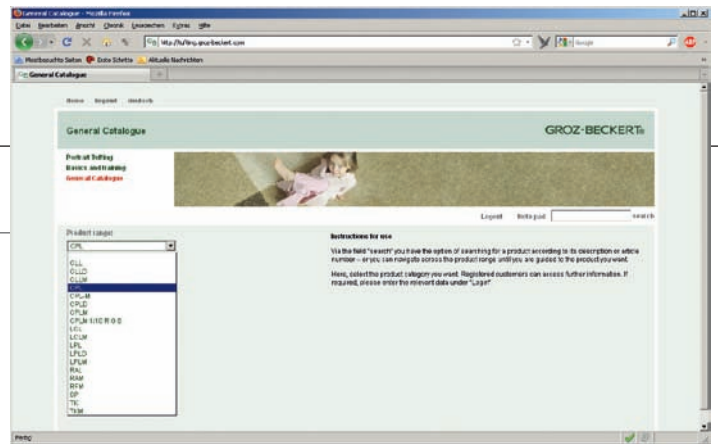

Full-text search

Apart from the linear search option described below, the online catalogue Tufting from Groz-Beckert also features a full-text search function. Accepted search items include article numbers and designations from the current Groz-Beckert and Schlemper portfolio as well as the previously customary designations from Schlemper, Eisbär and SNF.

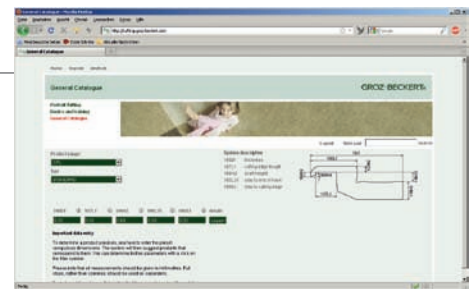

Selection of product group and product type

This is the alternative to the full-text search. Selection of the relevant product group (e.g. "Looper") is followed by a search for the required product type (e.g. "Standard").

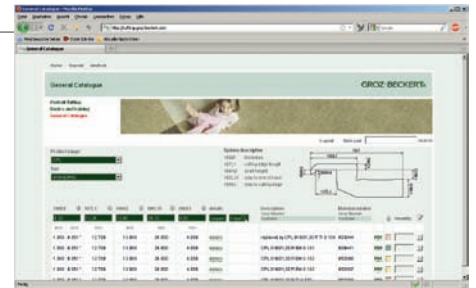

Selection of basic dimensions

This is where the main benchmarks and parameters of the product are established.

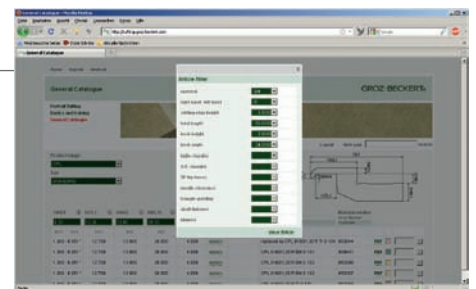

List of all suitable products

Based on the selection of product group and product type, as well as basic dimensions, the suitable product is selected. Registered tolerances that can be changed manually ensure that equally sensible product variants can also be offered alongside the basic version. Comparison of up to three products is therefore possible.

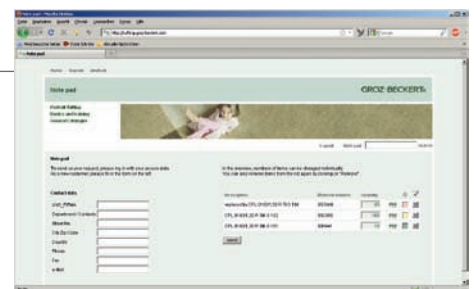

Narrowing down the list

If the product selection list is too lengthy, it can be narrowed down with the help of additional parameters and filter functions. All parameters stand in relation to each other. Mutual exclusions are automatically recognized by the system. In the next step, only products that fit are shown.

Inventory display and cumulative requests

Now the selected products, including their specifications, are tested for their availability. The traffic-light system shown guarantees transparency and provides information on availability from central storage. If products have been replaced by newer versions, the system indicates these. Here, a cumulative function also makes it possible to handle several requests simultaneously. The customer receives a copy of his or her e-mail request.

COMPREHENSIVE VALUE ADDED

The online catalogue Tufting from Groz-Beckert opens up new and efficient support for customers searching for the right tufting tools. Furthermore, the system not only provides generic product information, it also helps with faster, precise searches, providing basic knowledge of everything involved in the tufting business. Additionally, the online catalogue Tufting provides information on the Groz-Beckert company, its responsibility for the tufting industry worldwide, and the tufting tools system product.

Premium quality for tufting

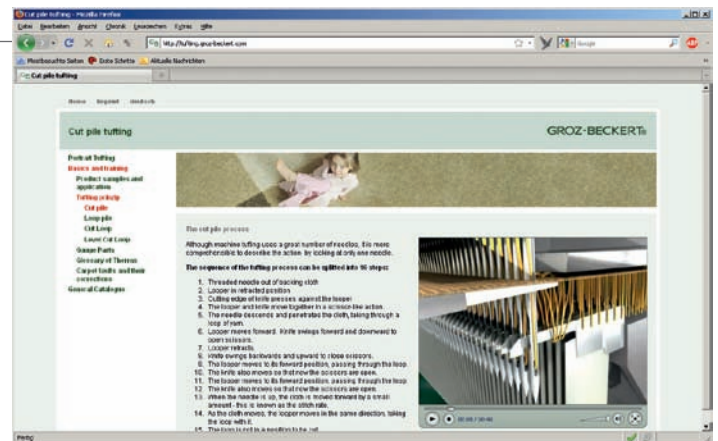

Groz-Beckert offers a comprehensive and state-of-the-art product portfolio for the production of all types of carpeting. The motto here is "performance and productivity in new dimensions". The new medium also provides information on how Groz-Beckert combines premium quality and tufting diversity.

Solid basic know-how

The online catalogue Tufting provides value added by integrating solid tufting know-how. Relevant explanations are visualized by means of images, graphics and animations. Maximum consistency is guaranteed by the Tufting Glossary, in which the product terminology of Groz-Beckert is explained – enabling the whole world of tufting to speak the same language in the future.

Help at any time

All the content of the online catalogue Tufting is laid out in a self-explanatory way, and operation is especially simple. All parameters requiring manual updating are indicated by means of diagrams or texts. Wherever necessary, the respective passages are followed by direct links to basic tufting know-how that has already been described. The buttons for more information are always located on the same level as the table headline.

ONLINE CATALOGUE TUFTING – REGISTRATION
